Junior High

WORK EXPERIENCE

Internship/On the Job Training

One Agno Medical Solutions

Mar - June 2026

IT Specialist

- Independently designed and developed an internal web-based system using Google Apps Script, handling the development and implementation of the system from start to finish.
- Developed and maintained internal applications, including the ANA (Attendance Notification Approval) system.
- Assisted in system development, debugging, testing, and troubleshooting, including fixing UI issues, notifications, user accounts, and system functions.
- Implemented and maintained automation features for personnel actions and data processing.
- Managed and tested user accounts, approvers, permissions, and dashboard functions within internal systems.
- Attended SCRUM meetings and participated in discussions regarding system requirements, issues, and improvements.
- Presented the independently developed system to company personnel and demonstrated its features and functionality.
- Created and updated user manuals, presentations, and system documentation to support employees in using company applications.

PROJECTS

PEMDASH: A Gamified Learning App on Order of Operations with Fractions and Decimals

Thesis Capstone Project | HTML5, CSS3, JavaScript, PHP, MySQL

- Led the full-stack end-to-end development of a gamified web app for Grade 4 and 5 Letran Elementary students, designing responsive UI layouts and engineering the PHP/MySQL backend architecture to support interactive math modules and dynamic progress tracking.
- Transitioned the platform from static frontend components to a database-driven system, integrating custom backend logic and teacher portal features that enabled instructors to assign tailored activities and manage student performance data.

ANA (Attendance Notification Approval)- One Agno Medical Solutions

Figma UI/UX & Web Project | Figma, HTML5, CSS3, JavaScript, PHP, Google App Script

- Designed and built an automated employee attendance and exception request management system for One Agno Medical Solutions, translating physical tracking forms into an intuitive dashboard interface.
